Jago Pulse

Art, rhythm and motion.

Create music-driven films, visualisers, animated posters and ambient backdrops. Generate source-free visuals or use your artwork, music and fonts, then refine an editable composition.

Your first few minutes

1. Add music from the header; choose full-track length or an excerpt.
2. Choose the visual range and film shape, then Compare 3 alternatives.
3. Use Timing to hear/correct the grid; use Motion and Colour to refine the selected scope.
4. Save .jagopulse, then use Finish or Use elsewhere for output.

Version 0.11.3 | Windows and offline browser edition

What you can do

Jago Pulse 0.11.3

- 47 visual families with 141 named looks in six collections.
- Seeded generation, compare-three alternatives, recipes, protected edits and saved directions.
- Layer stacks, masks, groups, precise motion channels and scene timing.
- Local music analysis, grid audition/correction, attacks, frequency and energy signals.
- Palette roles, evolving colour journeys, finishing filters and custom dimensions.

A useful way to work

Sound: import an exported WAV as a soundtrack.

Keep your editable project alongside finished exports. A rendered image, audio file or video preserves the result; the native project preserves the editing controls.

In this update

New tools and refinements

- Music-led film shapes create contrast, breathing room, recurring motifs and endings.
- Family-specific reactions, slower drift and fixed-centre or moving-perspective styles.
- Surprise me explores palette and cut choreography while respecting locks.
- Generated words have a separate switch; manual scene text and timed lyrics stay distinct.
- Import/edit lyric cues and optionally draft English words using the local transcription pack.
- Editable Workscape tabs preserve the composition and embedded assets.

Keep exploring

Use the editable examples and in-app help to try another direction. Save a copy before experimenting with an important project.

The controls described here are included in this version. Optional local tools are identified in the practical details; they do not run continuously.

Save, share & connect

Files you can keep

- .jagopulse projects, recipes and .jagopalette files
- PNG stills and timed PNG sequences
- Supported MP4/WebM exact-frame exports or playback recording fallback
- Music-excerpt WAV
- Supported timed-text exports

Connected workflows

- Sound: import an exported WAV as a soundtrack.
- Wobble / Repeat / Material / Library: add compatible art, sprite sheets and fonts.
- Dither: exchange a still, supported short clip or frames through file export/import.
- Workscape: editable tabs and saved embedded assets.

Practical details

Beat/cut estimates need listening; energy passages are not recognised musical verses.

Optional local English transcription drafts words/timing and needs correction; no vocal separation.

Video codec/size/alpha options depend on the selected exporter and device.

Rendered outputs are file exchange; broad editable cross-studio round trips are not provided.

Opening: Extract the complete ZIP and open Jago-Pulse.exe, or Jago-Pulse.html in a current Edge/Chrome browser. Keep support folders together.
